CLAIMS

1. (Currently Amended) A decorative or shiny coating for deposit directly on an article, said coating comprising:

a first leveling layer comprised of polymeric material deposited directly on at least a portion of the surface of said article to provide a leveling effect thereto, said article formed from plastic, ceramic, or metal; and

a second decorative layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound deposited directly on said first leveling layer.

Claims 2-44 (Cancelled)

- 45. (Previously Presented) The coating of claim 1 wherein said first leveling layer of polymeric material is selected from the group consisting of polycarbonate, polyester, polymethacrylate, polystyrene, acrylonitrile-butadiene-styrene, styrene-acrylonitrile, alkyd resin, polyethylene, and blends and copolymers thereof.
- 46. (Previously Presented) The coating of claim 1 wherein said compound is selected from the group consisting of a nitride, an oxide, a carbide, or a carbonitride of zirconium, titanium or zirconium/titanium alloy.
- 47. (Previously Presented) The coating of claim 1 further comprising a third protective layer comprised of a polymeric material selected from the group consisting of polymethane, polyacrylate or polymethacrylate on said second decorative layer.

48. (Currently Amended) A decorative or shiny coating for deposit directly on an article, said coating comprising:

a first leveling layer comprised of polymeric material deposited directly on at least a portion of the surface of said article to provide a leveling effect thereto, said article formed from plastic, ceramic, or metal;

a second adhesion promoting layer selected from the group consisting of zirconium, titanium or zirconium/titanium alloy deposited directly on said first leveling layer; and

a third decorative layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound deposited directly on said second adhesion promoting layer.

- 49. (Previously Presented) The coating of claim 48 wherein said first leveling layer of polymeric material is selected from the group consisting of polycarbonate, polyester, polymethacrylate, polystyrene, acrylonitrile-butadiene-styrene, styrene-acrylonitrile, alkyd resin, polyethylene, and blends and copolymers thereof.
- 50. (Previously Presented) The coating of claim 48 wherein said compound is selected from the group consisting of a nitride, an oxide, a carbide, or a carbonitride of zirconium, titanium or zirconium/titanium alloy.
- 51. (Previously Presented) The coating of claim 48 further comprising a fourth protective layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said third decorative layer.
- 52. (Currently Amended) A decorative or shiny coating for deposit directly on an article, said coating comprising:

a first leveling layer comprised of polymeric material deposited directly on at least a portion of the surface of said article to provide a leveling effect thereto, said article formed from plastic, ceramic, or metal; and

a decorative sandwich layer comprised of alternating layers of compounds selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound deposited directly on said first leveling layer.

- 53. (Previously Presented) The coating of claim 52 wherein said first leveling layer of polymeric material is selected from the group consisting of polycarbonate, polyester, polymethacrylate, polystyrene, acrylonitrile-butadiene-styrene, styrene-acrylonitrile, alkyd resin, polyethylene, and blends and copolymers thereof.
- 54. (Previously Presented) The coating of claim 52 wherein said compound is selected from the group consisting of a nitride, an oxide, a carbide, or a carbonitride of zirconium, titanium or zirconium/titanium alloy.
- 55. (Previously Presented) The coating of claim 54 wherein said decorative sandwich layer is comprised of alternating layers comprised of zirconium nitride and titanium nitride.
- 56. (Previously Presented) The coating of claim 52 further comprising a top protective layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said sandwich layer.
- 57. (Previously Presented) The coating of claim 52 further comprising an adhesion promoting layer selected from the group consisting of zirconium, titanium or zirconium/titanium alloy disposed intermediate said first leveling layer and said decorative sandwich layer.
- 58. (Currently Amended) A method for providing a decorative or shiny appearance to an article, said method comprising:

applying a first leveling layer comprised of a polymeric material deposited directly on at least a portion of the surface of said article to provide a leveling effect thereto, said article formed from plastic, ceramic, or metal; and

applying a second decorative layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound deposited directly on said first leveling layer.

- 59. (Previously Presented) The method of claim 58 further comprising the step of applying a third protective layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said second decorative layer.
- 60. (Currently Amended) A method for providing a decorative or shiny appearance to an article, said method comprising:

applying a first leveling layer comprised of a polymeric material deposited directly on at least a portion of the surface of said article to provide a leveling effect thereto, said article formed from plastic, ceramic, or metal;

applying a second layer comprised of zirconium, titanium or zirconium/titanium alloy deposited directly on said first layer; and

applying a third layer comprised of a compound selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound deposited directly on said second layer.

61. (Previously Presented) The method of claim 60 further comprising the step of applying a fourth protective layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said third layer.

62. (Currently Amended) A method for providing a decorative or shiny appearance to an article, said method comprising:

applying a first leveling layer comprised of a polymeric material deposited directly on at least a portion of the surface of said article to provide a leveling effect thereto, said article formed from plastic, ceramic, or metal; and

applying a decorative sandwich layer comprised of alternating layers of compounds selected from the group consisting of zirconium compound, titanium compound or zirconium/titanium alloy compound deposited directly on said first layer.

63. (Previously Presented) The method of claim 62 further comprising the step of applying a protective layer comprised of a polymeric material selected from the group consisting of polyurethane, polyacrylate or polymethacrylate on said sandwich layer.
